Policy #STR-0292009 SNOW REMOVAL PLAN FOR STREETS

Purpose: Springville City's objective is to provide an adequate transportation system for vehicles that are properly equipped for winter driving conditions. Optimal driving conditions will be provided as soon as practical during and after a winter storm. Certain streets have a higher intensity use and thus have a higher priority for snow removal.

Procedure: Springville City has established the following criteria for snow removal. See www.springville.org for priority streets.

Top: Primary streets, such as arterials, major collector streets, and designated snow routes that are determined to provide the basic transportation system for public safety, schools, high volume streets, steep grades, etc. These streets will be plowed from 5:00 a.m. to 10:00 a.m.

Secondary: Secondary and residential routes and selected minor collector, and residential streets deemed desirable to be maintained as weather permits. Traffic lanes only will be plowed.

Low-traffic city streets (including the airport and out-areas). Traffic lanes only will be plowed. Cut-de-sacs will receive one pass in and one pass out providing no cars are parked in the roadway.

It is the position of Springville City to maintain a hard pavement policy not to provide snow and ice removal on every city street during or after every snow storm event. Springville City only applies salt to intersections and roadways with steep grades.

City snow removal personnel and equipment operations are from 5:00 a.m. to 10:00 p.m. After periods in which movement of traffic has occurred, any snow is plowed into the road by any person, snow plows no longer become an option to totally clean snow packed or icy streets, except to move loose material on the top. Snow borne (weather of plowed snow) are a result of normal snow removal operations and are not removed by City personnel.

Driveways are not to be cleared by the individual property owner. Snow plowed into the street by citizens after City plows have cleared the street is prohibited and results in a safety hazard that causes ice build-up on the roadway surface. The融化 condition is difficult to completely clear snow packed or icy streets, except to remove loose material on the top.

Parked vehicles or trailers on the street inhibit snow plows from properly removing snow from the roadway surface. Vehicles and trailers blocking a street in which a snow plow cannot safely pass may result in the street not being plowed.

Snow Plow Routes with Priority

- Top priority street - 193 miles of plow route (4 passes)
- Secondary priority street - 24 miles of plow route (2 passes)
- Lower priority streets - 160 miles of plow route (2 passes)
- Not plowed by Springville City

Total miles of plow routes - 377
